## DETAILED ACTION

### *Election/Restrictions*

Applicant's election without traverse of the invention of Group I in the reply filed on May 26, 2009 is acknowledged.

Claim 44 is withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on May 26, 2009.

### *Claim Rejections - 35 USC § 101*

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-43 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The instant claims, particularly the independent claims 1, 42 and 43, are directed to simulation methods for manipulating data, which can be performed by hand or a programmed computer. The method steps must be tied to a particular machine or apparatus, or particularly transform a defined material to a different state.

No transformation of subject matter occurs in these method steps. Rather, the claimed invention is directed to simulation methods of gathering/inputting target data, determining model optical surface, comparing the target data to the simulated data, and adjusting set of refractive surgery system parameters. The only step in the claims that

may be considered a transformation method step is the step of adjusting refractive surgery system parameters. However, as recited in claims 2-4, the adjusted refractive surgery system parameters are directed to metric/mathematical functions such as root-mean square error factor, temperature factor, time factor, etc.

Furthermore, the court decided that in order to be considered patent eligible under 35 USC 101, a claimed process must contain a sufficient tie to a machine, article of manufacture or a composition of matter. In re Comiskey, 84 USPQ2d 1670 (Fed. Cir. 2007). In this case, the claimed invention has no tie to any machine, article of manufacture or a composition of matter.
